Item V

The application provides a method of pre-treating a non-conductive material which is to be subsequently electroplated, characterized by irradiating said material with UV light in a solution containing ozone.

The examples show that improved adhesion of the coating is achieved in short processing times without deterioration of the substrate.

Ozonisation (both in solution and in the gaseous state) as well as UV-treatment methods are known per se. Research Disclosure 33937/1992 represents probably closest prior art. It discloses a method of irradiating polyimides with UV-light in gaseous ozone for 5-10 minutes. A similar process is employed in a photolithographic patterning method in JP-A-2002 023367. There is no suggestion to perform said treatment in an aqueous ozone solution.

The claims appear to meet the requirements of Article 33(2) and (3) PCT.
